

Task & Model Selection

MODEL Gemini 3 Pro SERVER http://127.0.0.1:8110/chat/completions

⏹ Stop agibot_solve_math.yaml

Task

Expand

Goal: With your right arm, solve the math problem using the remaining cubes on the table

Note: 1. Depth image may contain nan values (holes). You need to handle them appropriately. You must return to home at the end of the code block (and not knock anything over). Do not return home and open the grippers at the beginning of the code block unless it is absolutely necessary.

2:50:19 PM Regenerate

The previous attempt failed to move the cubes, likely because the grasp height was too high (grasping the surface of the cubes rather than the center). I will adjust the grasp height to be lower (deeper) to ensure a solid grip. I will also re-detect the objects since the pile has been disrupted.

2:50:53 PM Block 2 Running...

Execution Details (3 steps)

Block 2

Robot Says Step 1

Retrying the math problem. I will find the 6 and 7 cubes and place them firmly.

SAM3 Text Segmentation Step 2

Querying SAM3 with text prompt: wooden cube with number 6
Result:

SAM3 Text Segmentation Step 3

Querying SAM3 with text prompt: wooden cube with number 7
